Why Algebra Antics?

Most people are fairly comfortable with basic arithmetic. So why do they panic when it comes to algebra? In a word: variables. How strange that letters, which seem so natural and non-threatening when used for words, become frightening when used with numbers. To be successful with algebra, you must make friends with variables.

Algebra Antics offers unique alternatives to traditional algebra instruction. With its innovative illustrations and unconventional techniques, you will:

- ★ Convert vague English words, phrases, and sentences into precise Math terms, expressions, and equations.
- ★ Balance scales with the Golden Rule of Equations, and have Fun at the Junction with coordinated pairs of boys and girls in dating relations.
- ★ Create a variable box, then meet Al Jabr, who wants to know what's in the box, and the reclusive Greta, who wants to get the box alone.
- ★ Enjoy helping terms get to their Family Reunions, then delight in Throwing Mud and Shooting the Chute to clear denominators and simplify equations.
- ★ Solve systems of equations by eliminating pesky variables or disguising and sneaking them in to Family Reunions.
- ★ Plot linear functions by building mountains and rolling balls. Master the Cat Technique for factoring and multiplying quirky quadratic equations.
- ★ Identify Word-Story (aka Worry) Problem types, and solve them step-by-step with the bright IDEAS method.
