

# Left vs. Right

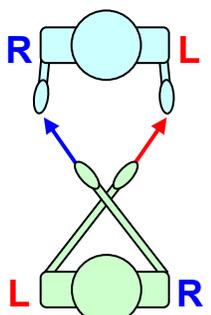

Most people sometimes mix up left and right. This could have harmless consequences, like making a wrong turn when driving. But it could be serious, as when a surgeon amputates the wrong leg.

 **Form an L with your Left hand and Left arm.**

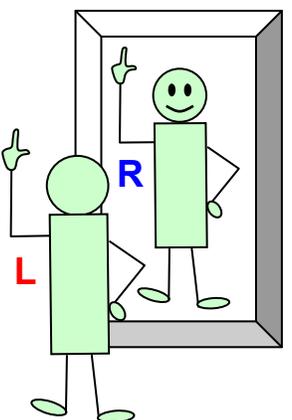

*Lean Left* *Roll Right*

**Paradox 1**  
When facing someone, your *left* arm is on their *right* side. Imagine reaching for a double handshake to match your sides.

**Paradox 2**  
When looking in a mirror, your *left* arm is on your reflection's *right* side and vice versa.

  
**Letter**

 In English, words are written and read Left to Right.

 **Your Turn!**

When facing someone, which side of their body is your right leg on? \_\_\_\_\_.

If you close your right eye, which eye will be closed in your mirrored reflection? \_\_\_\_\_.

Answers: Left side, Left eye
